

7th Quinquennial Review of Schedules 5 and 8 of the Wildlife and Countryside Act (1981)

Information Pack (version 2.2¹)

14 May 2021

¹ Version 2.2: Four reptiles and two seals removed from the EPS list (Annex 1); one EPS amphibian and two EPS reptiles that are all Endangered removed from Annex 2 – these species were included in Version 2 and/or 2.1 in error. See Annex 1 and Annex 2 for further information.

1. Introduction

Every five years, the country nature conservation bodies (Natural England, Natural Resources Wales and NatureScot), working jointly through the UK Joint Nature Conservation Committee (JNCC), review Schedules 5 and 8 of the Wildlife and Countryside Act (WCA) 1981. The review will provide recommendations to the Secretary of State for the Environment, Food and Rural Affairs and to Ministers for the Environment in the Scottish Government and Welsh Government for changes to these schedules². This is known as the Quinquennial Review (QQR).

As part of the QQR, stakeholders are provided with the opportunity to propose changes to the species on the schedules. This Information Pack has been produced for the 7th QQR (QQR 7). It is important to note that this QQR differs from previous ones. The Information Pack explains the new selection criteria, provides a timetable, and explains the process to be used by stakeholders. Contact details of the QQR Inter-agency Group who are managing QQR 7, are listed in Section 5.

In addition, the Information Pack provides details of how to complete the online survey through which stakeholders propose new species for inclusion on, or removal of existing species from Schedules 5 and 8, or propose a change to how species are protected on the schedules. It is absolutely essential that clear evidence is provided for each proposal.

2. New selection criteria

The QQR has three main steps for species to be proposed for listing on Schedules 5 or 8:

1. why species are considered (the Rationale);
2. which species should be considered (the Eligibility Criteria); and
3. if species meet the need for protection under the WCA (the Decision Criteria).

There are a number of changes to the QQR 7 process, compared to previous QRs, as a result of a review of the criteria by the QQR Review Group (consisting of JNCC and the three country nature conservation bodies and representatives of the non-governmental sector). Four changes were made and form the basis of QQR 7 (Table 1).

The outline below explains the criteria and how they have been revised in response to the review.

2.1 Rationale

The rationale states that the country nature conservation bodies will pursue scheduling of a species when an animal or plant is in danger of extinction in Great Britain. It must be shown how scheduling will improve the chances of survival. In England and Wales, all European Protected Species (EPS)³ are also listed on the schedules, but in Scotland they are listed under separate legislation.

2.2 Eligibility Criteria

Schedules 5 and 8 of the WCA focus on species endangerment and so selection under the Eligibility Criteria considers GB Red Listed species – those facing imminent threat of extinction (IUCN 2012⁴) in Great Britain (Table 1).

² Section 24(1)... “may at any time and shall five year after 30th October 1991 and every five years thereafter...”

³ Listed on Schedules 2 and 4 of The Conservation of Habitats & Species Regulations 2010.

⁴ IUCN (2012). Guidelines for application of IUCN Red List Criteria at Regional and National Levels: Version 4.0. IUCN SSC. IUCN, Gland, Switzerland and Cambridge, UK.

Table 1. The QQR Review Group recommendations

- | |
|--|
| 1. an objective measure of endangerment should be used as the basis for selecting species eligible for listing on Schedules 5 or 8; |
| 2. species that are IUCN nationally/regionally Critically Endangered or Endangered in Great Britain, or are shown to satisfy the criteria for Critically Endangered or Endangered, are eligible for listing on Schedules 5 or 8; |
| 3. a species' structure or place of shelter is a recognisable shelter or place that provides elements of habitat essential for its survival by virtue of being used regularly or permanently for protection, reproduction, growth, resting, hibernating, raising young etc.; and |
| 4. the following definition of destroying a plant or fungus is proposed: to "destroy" a plant or fungus means the deliberate removal of or damage to the substrate to which the plant or fungi is attached and / or rooted or doing anything to the plant or fungus which will kill it. |

2.3 Consequences of the criteria changes

The QQR review group recommendations which have been adopted (Table 1) have resulted in changes to the use of evidence in QQR 7. Stakeholders will only need to provide evidence to demonstrate how the **GB national/regional Endangered species⁵ listed in Annex 2** meet the 'Decision Criteria'. This evidence should be presented in the online survey (Section 4) and will be examined by the QQR Inter-agency Group prior to the consultation phase (Section 3).

Furthermore:

All **GB nationally/regionally Critically Endangered** species (Annex 1) will be automatically recommended for scheduling without needing to meet the Decision Criteria. **European Protected Species** will also be automatically proposed for listing on the schedules in England and Wales. EPS continue to be protected under the Habitats Regulations in Scotland and are not listed on the WCA schedules in that country;

GB nationally/regionally Extinct in the Wild and **Regionally Extinct** species will be placed on a parking list in case they return to Great Britain;

GB nationally/regionally Vulnerable, Near Threatened, and Least Concern species are no longer eligible.

Note: GB nationally/regionally Vulnerable species listed on the existing schedules will be evaluated by the QQR Inter-agency Group to check their conservation dependence on the protection afforded by the schedules. If their status is dependent on their schedule listing, their removal will be reconsidered.

It is important to emphasise that endangerment on its own is insufficient justification for recommending a species for scheduling. Many species will be endangered principally due to changes in land-use or land management leading to increased habitat fragmentation, deterioration or outright habitat loss. Such causes of endangerment do not, for the purposes of the QQR, constitute 'direct human ('reckless' in Scotland) pressures' as covered by Sections 9 and 13 of the WCA. To be recommended for scheduling, the endangerment of a species must, at least in part, be due to one or more of the direct human pressures listed in the Decision Criteria (see below).

2.4 Decision criteria

GB nationally/regionally Endangered species (Section 2.3; Annex 2) may be proposed for scheduling if they are subject to one or more of Sections 9 and 13 of the WCA offences and scheduling will address the cause of their endangerment. Evidence that a species meets these Decision Criteria should be submitted through the online survey which runs from 8 April to 7 July 2021 (Section 4 and see below).

⁵ <https://www.iucnredlist.org/resources/regionalguidelines>

The Decision Criteria for animals (Schedule 5) are:

- 9(1) intentionally or recklessly kills, injures or takes; or
- 9(2) possesses or controls; or
- 9(4) intentionally or recklessly damages, destroys, disturbs or obstructs its place of shelter; or
- 9(4A) intentionally or recklessly disturbs a dolphin, whale or basking shark; or
- 9(5) sells, offers or exposes for sale.

they are listed on Annex IV of the Habitats Directive (not in Scotland).

The Decision Criteria for “plants” (Schedule 8) are:

- 13(1) intentionally or recklessly picks, uproots or destroys; or
- 13(2) sells, offers or exposes for sale, or possesses for the purposes of sale.

they are listed on Annex IV of the Habitats Directive (not in Scotland).

2.5 Adding species

Proposals for additions to Schedules 5 or 8 will need to include evidence showing how the Decision Criteria have been met, and that listing the species on the schedules will provide the necessary protection. There is no need to consider the Eligibility Criteria because only Endangered species (Annex 2) can be proposed and these have already been checked against those criteria.

2.6 Species without GB Red List assessments

Importantly, species that have not been assessed against the IUCN national or regional Red List Criteria are at a clear disadvantage. However, if you have the evidence⁶ needed to classify a species as Critically Endangered or Endangered and the necessary supporting evidence needed to support the Decision Criteria please contact gqr@jncc.gov.uk for further advice (see also Figure 1).

2.7 Removing or changing the protection status of species

A species on the schedules can be recommended for removal if it is deemed that it no longer meets the Eligibility or Decision Criteria. Evidence will need to be provided to demonstrate that there will be no deterioration in status, that benefits received from being on the schedule are no longer needed, or that it is no longer threatened.

Similarly, evidence can be provided to change the level of protection of a species if the protection currently afforded to it is no longer appropriate. Separate online surveys will be used to provide this evidence.

Evidence showing how the changes proposed including changing the protection status of species (regrading) will benefit the species is required.

⁶ IUCN (2012). Guidelines for application of IUCN Red List Criteria at Regional and National Levels: Version 4.0. IUCN SSC. IUCN, Gland, Switzerland and Cambridge, UK.

3. Timetable

The target date for delivery of the QQR 7 to Defra and the devolved administrations is December 2021. Important dates and the phases of the review are provided in Table 2.

Table 2. QQR timetable.

Who	Estimated Dates
Stakeholders & the country conservation agencies submit proposals using the online survey.	8 Apr – 7 Jul 2021
Review of new proposals by the QQR Inter-agency Group	Jul - Oct 2021
Consultation on draft recommendations	Oct – Nov 2021
Approval sought from the Joint Committee and submission of final recommendations to Governments	Nov - Dec 2021

4. The online surveys

Evidence for proposing addition of species to, removal of species from, or changing the level of species' protection must be provided through separate online surveys (see links to the surveys below). Figure 1 provides a flow chart to help with completion of the online surveys.

Collaboration with the country nature conservation bodies and other stakeholders during the data gathering phase is strongly encouraged. Please contact the country nature conservation bodies if you would like to invite their specialists into discussions or need more information (see Section 5 for contact details).

4.1 Completing the online surveys

Instructions for how to complete the online surveys are given below. Note that some of the pages require an answer. If you have omitted to answer a question requiring an answer, you will be redirected to that question when you click on **Next Page**.

Addition of species to the schedules

<https://www.smartsurvey.co.uk/s/QQRAddition/>

Password: Addition

- A) Read the introduction and then click **Next Page**. Note that you need to start a new survey to propose more species.
- B) If the species you wish to propose has not been assessed against the IUCN national/reginal Red List criteria but you have the evidence to support a Extinct in the Wild, Regionally Extinct, Critically Endangered or Endangered category, please contact gqr@jncc.gov.uk.
- C) Please confirm you are proposing to add a species to the schedule. Click **Next Page**.
- D) Fill in your name and organisation details. Click **Next Page**.
- E) As indicated above, only species in the Endangered category of the IUCN Red List are eligible (see [Section 2.3](#) for explanation). Please provide the name of the Endangered species from Annex 2 that you wish to be added. The species must be recognisable in the field if it is to appear on the schedules. Click **Next Page**.
- F) Indicate under which Decision Criteria you are proposing to add the species. You must tick Yes or No for each Decision Criterion. For those criteria which you have ticked Yes please enter supporting evidence.
- G) The Decision Criteria for animals (Schedule 5) are:
 - 9(1) intentionally or recklessly kills, injures or takes; or
 - 9(2) possesses or controls; or
 - 9(4) intentionally or recklessly damages, destroys, disturbs or obstructs its place of shelter; or
 - 9(4A) intentionally or recklessly disturbs a dolphin, whale or basking shark; or
 - 9(5) sells, offers or exposes for sale.

they are listed on Annex IV of the Habitats Directive (not in Scotland).

The Decision Criteria for “plants” (Schedule 8) are:

- 13(1) intentionally or recklessly picks, uproots or destroys; or
 - 13(2) sells, offers or exposes for sale, or possesses for the purposes of sale.
- they are listed on Annex IV of the Habitats Directive (not in Scotland).

- H) This question asks you to explain how scheduling the species will prevent decline. There is a 30 to 500 word restriction. Enter the evidence and then click **Next Page**.
- I) Please start another survey if you want to propose the addition of another species.

Removal of species from the schedules

<https://www.smartsurvey.co.uk/s/QQR7Removal/>

Password: Removal

- A) Read the introduction and then click **Next Page**. Note that you need to start a new survey to propose more species. Critically Endangered species cannot be removed.
- B) Please confirm you propose to remove a species from a schedule. Click **Next Page**.
- C) Fill in your name and organisation details. Click **Next Page**.
- D) Insert the name and details of the species that you want to propose for removal from the schedule. Click **Next Page**.
- E) Please list the current protection of the species on the schedule. Click **Next Page**.
- F) The justification box is where you need to enter the evidence. Please make sure that you provide sufficient evidence to show that the species will not become threatened if removed from the schedules.
- G) Please start another survey if you want to propose the removal of another species.

Change in protection status for species on the schedules

<https://www.smartsurvey.co.uk/s/QQR7Regrading/>

Password: Regrading

- A) Read the introduction and then click **Next Page**. Note that you need to start a new survey to propose more species.
- B) Please confirm you are proposing to change (regrade) the protection status of a species on the schedule. Click **Next Page**.
- C) Fill in your name and organisation details. Click **Next Page**.
- D) Insert the name of the species that you want to propose for a change in status (regrade). To start entering the evidence click **Next Page**.
- E) Please list the current protection of the species on the schedule. Click **Next Page** (for reference see the [Schedule 5 & 8 species and protection status spreadsheet](#)).
- F) Question 7 asks you to show how you are proposing to change the protection status of the species. For example, if a plant has full protection and you propose that there is no longer a market for the sale of it, indicate this by writing: Removal of protection under 13(2)a sale and 13(2)b advertising for sale. Alternatively, if an animal has protection against killing, injuring or taking only but there is now evidence that the animal is being sold, indicate this by adding below: 9(5)a sell, transport, trade, and 9(5)b advertising for sale. Refer to the previous question for the correct terminology. Click **Next Page**.
- G) The justification box is where you need to enter the evidence in support of your proposal. Please make sure that you provide sufficient evidence to show that the species will benefit and not become further threatened if its protection status is changed.
- H) Please start another survey if you want to propose the regrading of another species.

Annex 1. Lists of Critically Endangered (CR) species and European Protected Species (EPS) in Great Britain that will be proposed for listing on to the Schedules automatically.
Note that EPS will be proposed for listing on the schedules in England and Wales only, as they are already afforded protection in Scotland through the Habitats Regulations.
There is no need to enter any data for the CR species or EPS.

National/Regional Critically Endangered (IUCN status CR) species in Great Britain

List of European Protected Species (EPS).

Several species were included in the previous versions of the EPS list in error and have been corrected as follows:

Version 2.1 of the Information Pack: four reptiles removed from the EPS list – adder *Vipera berus*, grass snake *Natrix helvetica*, viviparous lizard *Zootoca vivipara* and slow-worm *Anguis fragilis*.

Version 2.2 of the Information Pack: two seals removed from the EPS list – harbour seal *Phoca vitulina* and grey seal *Halichoerus grypus*.

Scientific name	Common name	Broad group	EPS

Annex 2. National/Regional Endangered species in Great Britain to be evaluated against the Decision Criteria.

The following amphibian and two reptiles were included in Annex 2 in error in Version 2 of the Information Pack: natterjack toad *Epidalea calamita*, smooth snake *Coronella austriaca*, and sand lizard *Lacerta agilis*. These were removed from version 2.1, as they are EPS, and due to their EPS status, they will automatically be proposed for listing on the schedules.

Select from this list to propose species to be added to Schedules 5 or 8.
